

# Introduces it's **NEW** Asphalt Repair Service

## Infrared Asphalt Restoration

Using the latest infrared heat technology equipment

*Benefits of Infrared  
Restoration vs. Conventional  
Remove and Replace Methods*

- **Faster**—30 min. repair means minimal disruption to traffic
- **No cold joints**—Prevents future entryway for water (future pothole)
- **Less manpower**
- **Less equipment**
- **Environmentally friendly** — recycles existing asphalt materials minimizing waste

Pavement Restorations, Inc. was founded by Jon and Kim Hargett. After eleven years of managing a division of a large asphalt construction company, Jon realized the need for a high quality asphalt repair contractor. Asphalt prices have jumped nearly 50% in the last year. Using infrared heat technology will allow you to repair your potholes, utility cuts, rough surfaces, alligator cracks, and bird-baths at an affordable cost by recycling the existing asphalt. Rejuvenators are applied to old asphalt to introduce new oils to the process providing a long lasting repair. New asphalt is added as needed to complete the repair.

### Permanent Asphalt Repair

**Prompt, Professional Service**

**Cost Effective Repair Solutions**
